## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or  
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Jain et al. (US 6,376,371).

Jain et al. discloses a metallization structure (the metallization structure is capable performing as a bonding pad structure and is considered as a bonding pad structure) comprising: a copper layer (36) ( Col.5, lines 25-30); a passivation layer (56) formed over the copper layer having a pad window to expose a portion of the copper layer; a barrier layer (64, a TaN layer) (col.5, line 45) conformal to a profile of the pad window and extended along the surface of passivation layer from the pad window; and an aluminum layer (66) (col.5 lines 59-60 and 27-30) located in the pad window. See Jain et al.'s Fig.6.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims have been considered but are not persuasive.

Applicants argue that Jain et al. does not teach a bonding pad structure. In response, as above discussed, it is noted that a bonding pad is a conductive layer can be bond to another conductive layer, so Jain et al.'s metalization structure can be function as a bonding pad structure. Moreover, "a bonding pad structure" in the preamble of claim is considered as an intended use limitation. An intended use found in the preamble is not afforded the effected of a distinguishing limitation unless the body of the claim sets forth structure which refers back to, is defined by, or otherwise draws life and breath from the preamble. In re Casey, 152 USPQ 235 (CCPA 1967).

Applicants argue that Jain et al. does not teach "a barrier layer conformal to a profile of the pad window and an aluminum pad located in the pad window. In response, as above, Jain et al. clearly teach es these limitations.

### ***Conclusion***

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2811

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
